Opening

LED bar

The LED bar is a picking tool that will increase your productivity. Equipping the front edge of the opening with a LED bar enables operators to quickly locate the picking location. The LED bar consists of a series of LED lights that indicate the row from which the item is to be picked, and the display shows the depth location on the tray. Improve the user experience even further with a pick display that indicates item location.

In order for the LED bar to work, the vertical storage lift must be controlled by one of our inventory management software packages, e.g. Compact Store.

Opening

Confirmation buttons

As an optional extra, our vertical storage lifts can be equipped with recessed confirmation buttons that enables you to save even more time.

The buttons allows the operator to avoid having to take unnecessary steps and acknowledge picks with one simple press.

Each handling opening has two recessed confirmation buttons located next to the depth indicator display, at the right distance to ensure that they are always close at hand.
